

Press release SOCO 2020

6. July 2020 | Renningen

SOCO 2020 has an exciting and multi-faceted program and is now available for everyone free of charge

Interactive, simple, efficient and almost climate-neutral – that was SOCO 2020 last Tuesday. In addition to exciting lectures on numerous specialist topics, visitors were able to exchange and discuss directly with PV experts from politics, industry and science. All sessions took place on a common platform, cross-manufacturer, multilingual, digital and therefore without long journeys to the trade fair or queues. From now on, the approximately 100 program sessions can be viewed on the SOCO platform free of charge and without registration.

SOCO 2020 started off with a varied program of interesting lectures from various perspectives. The potentials of the new European Green Deal in the keynote speech by Aurelie Beauvais, SolarPower Europe, or the tension between climate protection in the era of Covid-19, presented by Professor Volker Quaschnig, were on the conference agenda, as the economic, social and labor theory view of increasing digitization and the current Covid-19 situation. In addition, the pros and cons of hydrogen technology were discussed by energy expert Hans Urban and crowd investing in solar projects by ecoligo. The presentations, mostly lasting half an hour, present the status quo as well as future trends and make clear which steps are necessary for more effective climate protection and a real energy turnaround.

Exclusive insights were also provided by the informative and very varied program of the ten manufacturers K2 Systems, Fronius, EnBW, SMA, SolarEdge, Axitec, REC, Kostal, Trina Solar and GoodWe. These manufacturers presented their innovations, best practices and new products for 2020 in their digital exhibition areas on the SOCO platform, where visitors can now also look up all sessions, mostly in German or English, and get a compact overview of this year's highlights from the leading module, inverter and mounting system manufacturers.

Directly to the conference programme and the manufacturers' programme.
