### Quality tested – several certifications

K2 Systems stands for secure connections, highest quality and precision. Our customers and business partners have known that for a long time. Independent institutes have tested, confirmed and certified our capabilities and components.

Please find our quality and product certificates under: [www.k2-systems.com/en/technical-information](http://www.k2-systems.com/en/technical-information)
Tool overview

- 5 mm
- 6 mm
- 13 mm
- 15 mm

- 6 - 32 Nm
  (4.5 - 22.2 lb-ft)

- ≥3.0 m
- ≥6.0 m
General safety information

Please note that our general mounting instructions must be followed at all times and can be viewed online at www.k2-systems.com/en/technical-information

- The equipment may only be installed and operated by qualified and adequately trained installers.

- Prior to installation, ensure that the product complies with on-site static loading requirements. For roof-mounted systems, the roof load-bearing capacity must always be checked.

- National and local building regulations and environmental requirements must be adhered to.

- Compliance with health and safety regulations, accident prevention guidelines and applicable standards is required.
  - Protective equipment such as safety helmet, boots and gloves must be worn.
  - Roofing works must be in accordance with roofing regulations utilising fall protection safeguards when eaves height exceeds 3 m.
  - At least two people must be present for the duration of the installation work in order to provide rapid assistance in the event of an emergency.

- K2 mounting systems are continuously developed and improved and the installation process may thereby change at any time. Prior to installation consult our website at www.k2-systems.com/en/technical-information for up-to-date instructions. We can send you the latest version on request.

- The assembly instructions of the module manufacturer must be adhered to.

- Equipotential bonding/grounding/earthing between individual parts is to be performed according to country specific standards, as well as national laws and regulations.

- At least one copy of the assembly instructions should be available on site throughout the duration of the installation.

- Failure to adhere to our general safety and assembly instructions and not using all system components, K2 is not liable for any resulting defects or damages. We do not accept liability for any damage resulting in the use of competitor’s parts. Warranty is excluded in such cases.

- German law shall apply excluding the UN Convention on CISG. Place of venue is Stuttgart. Our General Terms of Business apply.

- If all safety instructions are adhered to and the system is correctly installed, there is a product warranty entitlement of 12 years! We strongly recommend reviewing our terms of guarantee, which can be viewed at www.k2-systems.com/en/technical-information We will also send this information on request.

- Dismantling of the system is performed in reverse order to the assembly.

- K2 stainless steel components are available in different corrosion resistance classes. Each structure or component must be carefully checked for possible corrosion exposure.
The following generally applies:

The K2 standing seam system can be used routinely for most wind and snow loads. We recommend using our K2 Base measurement tool for calculating the effective span. Even if the system is capable of meeting higher demands through the integration of safety standards, please get in touch with your contact at K2 Systems if the specified values are exceeded.

Requirements for the roof

- Adequate roof cover holding force on the support structure or substructure.
- Roof incline: 5 - 75°

Static requirements

It is important to ensure that the roof cover and support structure can absorb the forces transmitted from the clamp to the seam.

Important assembly information

- The standing seam clamp may impede thermally induced changes in length under some circumstances. A distance of 17.5 cm between the standing seam clamp and the roof cover brackets (mounting bracket, clip, sliding cleat) must be taken into account to ensure the linear expansion of the roof cover.
- The installation company must initially check that the standing seam clamps are suitable for the intended purpose.
- If the roofing material is made of copper, standing seam clamps made of aluminium must only be used in combination with a stainless steel inlay in order to prevent electrochemical corrosion.
- Pre-position the standing seam clamps and slightly tighten the grub screw. Only tighten the standing seam clamps with the specified tightening torque after mounting the rails.
- For all clamp fixtures it is important to ensure that the first rail position is installed so that it runs transversely to the seam and, where applicable, with cross bracing.
- The components must be thermally separated after a maximum of 6.5 m.
- The general standards and regulations for lightning protection must be observed on site and, where appropriate, a specialist must be consulted in order to draw up a lightning protection concept (use a lightning protection clamp if necessary). Country-specific regulations must be observed.
- The tightening torque of all module clamps is 14 Nm.
- A minimum mounting distance of 50 mm from the end of the rail/rail joint to the module frame.
- Observe the manufacturer’s specifications for the clamping range of the module clamps and for mounting the modules (see the manufacturer’s module data sheet).
- The mounting components are not climbing aids!
- The system must be checked by a specialist company after exceptional events, such as storms, heavy rain, earthquakes etc. If deformed or loose components or other damage is determined when checking the system, these must be replaced with new components.
Components

1. Item number system-specific!
   Standing seam clamps, see page 8!

2. Item number system-specific!
   SingleRail or SolidRail and matching rail connectors
3 Item number system-specific!
End clamps

4 Item number system-specific!
Middle clamps

Optional

Item number system-specific!
SolidRail connection: T-bolt and locking nut

1006041
Climber 36/48 set

2002544
Adapter plate SolidRail

2001640
Stainless steel inlay for copper roofs
Available standing seam clamps and rail connection

Compatible with SingleRail

**Single Standing Seam Clamp CF:x 200304**

- **Seam type**: Double standing seam
- **Sheet thickness**: 0.4 - 1.0 mm
- **\( M_C = 18 \text{ Nm} \)**
- **\( M_R = 15 \text{ Nm} \)**
- **\( a = 7.0 \text{ mm} \)**

**Single Snap Seam Clamp CF:x 2003083**

- **Seam type**: Angled and snaplock standing seam
- **Sheet thickness**: 0.4 - 1.0 mm (Steel panel ≤ 0.7 mm)
- **\( M_C = 18 \text{ Nm} \)**
- **\( M_R = 15 \text{ Nm} \)**
- **\( a = 14.0 \text{ mm} \)**

**Single Round Seam Clamp CF:x 2002859**

- **Seam type**: Round standing seam (e.g. Bemo, Kalzip, Aluform, Rib-Roof Evolution)
- **Sheet thickness**: 0.6 - 1.2 mm
- **\( M_C = 18 \text{ Nm} \)**
- **\( M_R = 15 \text{ Nm} \)**
- **\( a = 25.0 \text{ mm} \)**
## Compatible with SolidRail

### Solid Standing Seam Clamp

**Model:** 2001712

- **Seam type:** Standing seam (min. 25 mm height)
- **Sheet thickness:** 0.7 mm
- **Clamping range:** 3.5 mm
- **Moments:**
  - $M_C = 20 \text{ Nm}$
  - $M_R = 32 \text{ Nm}
  - $\alpha = 3.5 \text{ mm}$

### Solid Snap Seam Clamp CF:x

**Model:** 2003082

- **Seam type:** Angeled and snaplock standing seam
- **Sheet thickness:** 0.4 - 1.0 mm (Steel panel ≤ 0.7 mm)
- **Moments:**
  - $M_C = 15 - 17 \text{ Nm}$ (galvanised steel panel > 0.7 mm = 18 - 20 Nm)
  - $M_R = 32 \text{ Nm}$
  - $\alpha = 11.5 \text{ mm}$

### Solid Round Seam Clamp

**Model:** 2001853

- **Seam type:** Round standing seam
- **Sheet thickness:** ≥ 0.7 mm
- **Moments:**
  - $M_C = 20 \text{ Nm}$
  - $M_R = 32 \text{ Nm}$
  - $\alpha = 10.5 \text{ mm}$
  - $\phi = 19.0 \text{ mm}$

### S-5! Z-Mini-FL Round Seam Clamp

**Model:** 1000888

- **Seam type:** Round standing seam
- **Sheet thickness:** 0.6 - 1.2 mm; $\phi$ seam profile ≤ 23 mm
- **Moments:**
  - $M_C = 15 - 17 \text{ Nm}$ (galvanised steel panel > 0.7 mm = 18 - 20 Nm)
  - $M_R = 32 \text{ Nm}$
  - $\alpha = 11.5 \text{ mm}$
Compatible with SolidRail

S-5! E-Mini-FL Standing Seam Clamp 1001052

Rib-Roof 465 Clamp 2002118

Material: Aluminium

<table>
<thead>
<tr>

<td></td>
</tr>
</tbody>
</table>

* From delivery year 2005; older roofs on request
Assembly

Basic assembly

1. Pre-position the standing seam clamps and slightly tighten the grub screw.

2. Tighten the mounting rail connection only by hand as the position usually needs to be adjusted.
3a SingleRail

Tightening torques $[M_c, M_r]$ see page 8!

3b SolidRail

Tightening torques $[M_c, M_r]$ see page 9-10!
Portrait: 1 rail position
Landscape: 2 rail positions, clamping of long module edge
Landscape: 1 rail position, clamping of short module edge
Thermal separations

 Thermal separation every 6.5 m

≥200mm
Thank you for choosing a K2 mounting system.

Systems from K2 Systems are quick and easy to install. We hope these instructions have helped. Please contact us with any questions or suggestions for improvement.
