Press Release

March 22, 2023 | Oceanside CA

## **K2 Systems launches a quick bill of materials and price tool**

K2 Quote is a tool that you can use to get a bill of materials (BOM) and pricing for your K2 Systems' projects. The tool is available for all US installers and distributors. Pricing is based off K2's most current price list. All components will be shown at the list price unless a discount percentage is applied. The current version is available to design CrossRail dual rail systems only, but more system offerings will be added throughout the year.

When you go to the K2 Systems US website, you will see a button for K2 Quote on the top header menu. Click on that and it will take you directly to the tool. You do not need an account to use the tool, but if you are wanting to save your projects, then you will be prompted to create an account. The tool allows you to do a simple, non-engineered design with one or multiple roof arrays. Simply select your module manufacturer and model, attachment spacing, rail type, rail length, rail color and end clamp, then click and drag your roof arrays.

Once you are satisfied with your roof arrays, click "Get Estimate" and this will show you your pricing breakdown. The system automatically uses a "generic attachment" in case users prefer to install another manufacturer's roof attachments; therefore, pricing here is only an estimation. If you choose to override this with a K2 specific attachment, then your pricing will be changed to an accurate number. When your BOM is complete you can download it as an excel or csv file to submit to your distributor for an order.

K2 Systems is proud to launch this tool and hope that it helps installers and distributors improve their business process.

Keep in mind, that for an engineered design, K2 Base is still available to use:

## The K2 Systems Vision

K2 Systems stands for worldwide power generation from solar energy.

The heart of the company is the development of installation-friendly mounting systems that are tailored to the needs of our customers, though the soul is the common spirit of all employees. Together we define technical innovation and set new service standards for a sustainable future.

---

## K2 Systems International

As a manufacturer of mounting systems for solar technology, K2 Systems has been developing innovative system solutions for the international photovoltaics industry since 2004. They have over 17 years of experience as roof top specialists and have installed over 27 GW worldwide.

420 employees work on cost-efficient and trend-setting mounting systems for roofs across the world at the German headquarters in Renningen and the nine branches in England, France, Italy, South Africa, Brazil, USA, Mexico, Australia and Slovenia. International customers and partners are convinced by the high quality and functionality of the proven mounting systems for installation on pitched and flat roofs or for tailor-made projects.

The longstanding experience, the service-oriented principles, as well as the personal touch in all dealings ensure that K2 Systems International is the ideal partner.
