

### K2 opens new location in the fast-growing Spanish PV market

Innovation and expansion are the driving forces that have encouraged K2 Systems to open a new location in Valencia as the eleventh international location of the company. This Spanish expansion represents a boost for K2's European presence and at the same time highlights its commitment to sustainability.

"At K2 we like challenges, we always want to go beyond, to surpass ourselves in order to provide customers with efficient solutions and advanced technical support. With my new colleagues, now we can really do things in a big way", says Miguel Giménez. The Country Manager for Spain and Portugal with more than fifteen years of PV experience continues: "We are delighted to announce the opening of our new location in Valencia. This marks a new chapter for us, where we look forward to sharing our expertise with our customers and distributors and introducing our innovative solutions within this dynamic and prolific market."

As a company that has been working in the solar industry for many years, it is essential for K2 to be able to know and serve the constantly evolving PV market in Spain and the new team will be committed to this goal. "We are very confident and optimistic about the targets we will be able to achieve in 2024 towards both industrial and residential building projects. Up to now, due to the most common roofs in Spain like trapezoidal sheet metal, tile roofs and flat roofs, the mounting systems that most arouse the interest of Spanish customers are still MultiRail, SolidRail and the Dome 6 allrounder. Regarding new products, we are convinced that the new ground mounted systems will be very interesting for many customers and will become a product characterized by very high quality, the same that K2 always guarantees to its customers. Through these systems provided by K2, we are sure that we can aspire to realize photovoltaic projects up to 15 megawatt", continues Miguel Giménez.

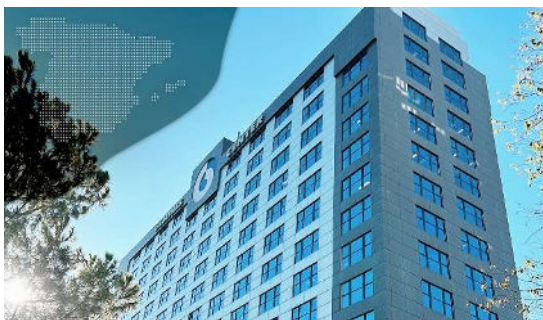

The new location, whose office is in the highly technological Geminis Center building, is in the new business district of Valencia. With this local presence, K2 hopes to be agile and able to quickly respond to economic and environmental challenges. Now it is important to emphasize how much this commitment on the part of the new team will represent an important advantage not only for customers, but also for installers who will see in K2 a faithful ally. Thanks to the larger team and to the technical expertise of each of the Spanish K2 members, the company is even more strongly positioned in Spain.

K2 Systems continues to play a central role in the promotion of the energy transition and, of course, the company continues to regard Spain as an extremely interesting and attractive market. Since Spain is located in the part of Europe with the most solar radiation, investments in solar installations pay back very quickly because energy production is very high.

## Connecting Strength

**About K2 Systems:** We connect strengths: innovative mounting systems, digital technology and people with the know-how and energy to drive sustainable solutions.

Since 2004, K2 Systems has stood for global power generation from solar energy. The heart is the development of easy-to-install mounting systems that are precisely tailored to the needs of our customers. The soul is the common spirit of all employees. Together, we define technical innovation and set new service standards digitally as well.

At our headquarters in Renningen and our eleven international locations, we develop and sell mounting systems together with 400 employees for the roofs of this world.
