

Connecting Strength

Our Environmental Commitment

Collaboration is essential if we want to make the world a better place, so let's connect our strengths! We all bear the responsibility of safeguarding our planet for the well-being of future generations.

Our commitment to sustainability

Our dedication extends beyond energy creation. It is paramount that the products we offer are manufactured with a profound sense of responsibility.

Ensuring that K2 products align with ethical and sustainable practices is not just a commitment but a crucial step in our journey toward a greener and more sustainable future.

Corporate culture

We take our business processes and logistics seriously to ensure full adherence to ESG recommendations and regulations. This commitment is embedded in our culture.

Moreover, we go a step beyond. Whether through internal initiatives or external collaborations, we are dedicated to creating lasting value. We believe that every individual has the potential and responsibility to make a difference and contribute to making our world a better place.

More:

Governance & corporate commitment

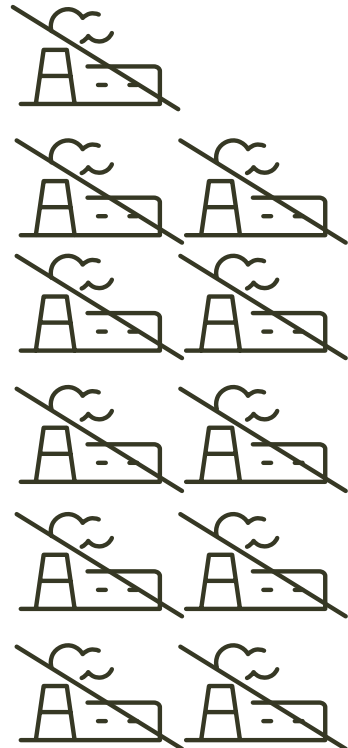

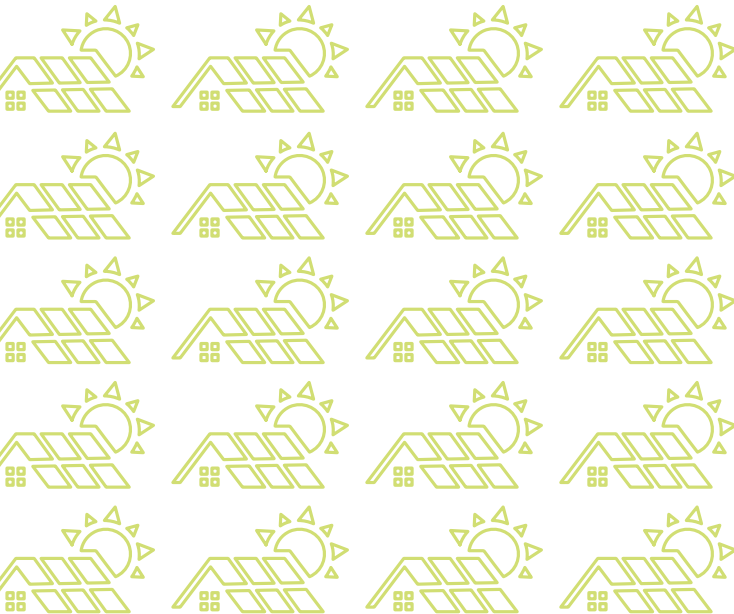

- Our own PV systems generate 100% of our electricity in our headquarter building
 - Over half of our vehicle fleet consists of electric cars
 - We offer subsidies for the use of public transport and e-bikes
 - We are active in trade associations at regional, european and international levels
- Our team comes from over 40 nations with more than 32 languages
 - We support people when help is needed, fast and unbureaucratic
 - We support our community through numerous local initiatives

Our social commitment

110 GWh produced daily

That is how much solar energy is produced using K2 Systems; approximately the same amount of energy that is produced by 11 coal-fired power plants.

75% of K2 products are made from recycled aluminium

We take advantage of the fact that the production of recycled aluminium requires 95% less energy than

primary produced aluminium.

Recycled aluminium

requires only 5% of the energy needed to produce primary aluminium.

By prioritising recycled materials, we not only reduce our carbon footprint, but also promote sustainable production processes in our industry.

A large circular graphic on the right side of the page, composed of many thin white lines radiating from the center to the edge, creating a sunburst or target-like effect. The lines are more densely packed at the top and bottom, and more sparse on the sides.

5%

energy required

Below average is above average

The CO₂ footprint of the aluminium used in K2 products is significantly better than those of global and even European primary production processes per tonnes.

This achievement is made possible through collaboration with our partner suppliers, who are dedicated to reducing the carbon intensity of their primary production and increasing the utilization of recycled aluminum.

85%

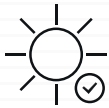

of our products are manufactured in the EU, a strategic approach aimed at minimizing CO₂ emissions, ensuring compliance with EU quality, environment and social standards, and supporting local production.
