

General packaging and delivery regulations

1 General packaging information

The packing instructions apply for all suppliers. This is for standardization of delivery note information, labelling, packaging and label marking of palletized and bundle goods.

In addition to this general regulation, the specific packaging regulation of a type always applies.

K2 Systems would like to work together with their suppliers on a basis of trust. Working according to K2 packaging instructions is necessary for a smooth process.

K2 reserves the right to take further action in the event of permanent non-compliance.

1.1 Questions or remarks

In case you have any questions or remarks concerning the packing instructions, please do not hesitate to contact us via email under packaging@k2-systems.de.

1.2 Delivery Notification

The time slot for deliveries must be booked in advance through our timeslot tool myleo for the respective place of delivery.

1.3 Marking

Each pallet and bundle of goods must be marked with labels by the supplier. They must contain the following information:

- Article number
- Article description
- Batch number
- Quantity
- Weight
- GTIN-number

Additionally, to the K2 Systems label template, the VDA label can be used.

Prerequisite for using the VDA label: The supplier's logo and name must not appear on it.

Each box must be marked with a K2 Systems label by the supplier.

General packaging and delivery regulations

1.4 Delivery note

The following information must be included in the delivery note:

- Delivery address
- Order number of K2 including order item
- Order number of supplier if needed by supplier
- K2 Systems article number
- Article description
- Order and delivery quantity, in case of partial delivery with note
- Packaging units
- Number of packages incl. weight
- Country of origin

In case of triangles and special constructions, consumables (article number of the preliminary product) for each finished article and quantity must be noted on the delivery note.

1.5 Packaging of a pallet

- The pallet must be kept homogeneous and batch clean
- If mixed pallets are required for stock goods due to economic reasons, the different articles must be visibly separated from each other (e.g. by cardboard); unequal packaging units must also be marked
- The pallet must be labelled with the contents of the pallet. Alternatively, the delivery note copy may be used
- **The packaging must guarantee a damage-free transport**
- The pallet is to be packed waterproof and tight, but also transparent with stretch foil. Use strapping and/or edge protection if necessary
- The maximum weight of the packaging unit of a carton is 23 kg
- The specified quantities per carton and pallet must be adhered
- The cardboard boxes may only be sealed with adhesive tape. Other sealing solutions such as stapling and clips are not accepted

1.6 Packaging of profiles/mounting rails

- All bundles must be packed stackable and batch clean.
- Packaging material: IPPC wood fumigated according to ISPM 15 wood protection regulations.
- Profiles within the bundle must not be able to slip.
- The wood bars must be provided with a groove in which the strapping must run.
- The wood bars must be connected to each other (nail / screw or similar).
- The specific packaging instructions have to be checked for additional strappings.
- The maximum permissible total weight of 800 kg per bundle must not be exceeded.
- Rails can include additional packaging, such as foil, paper interlayers or cardboard, in the specific packaging instructions.
- Every bundle is to be kept with just one different article.

General packaging and delivery regulations

2 Filling in the K2 label

Regulates the standardized procedure for filling in the K2 label.

Responsible for the correct recording of the data and the use of the current K2 label is the supplier.

2.1 Login

The labels provided by K2 (in pdf-format) are to be used.

General packaging and delivery regulations

Composition of the 15-digit batch number

* symbol asterisk - start of batch number (necessary)

Digits 1-3 Numeric country code of the country of origin according to [ISO 3166-1](#)

Digits 4-9 K2-Supplier number (only numerical)

Digits 10-15 Production starting date (format: DDMMYY)

* symbol asterisk - end of batch number (necessary)

Input field	Description
Batch	<p>Entry of the batch number (for definition of the batch number, see above)</p> <p>If your supplier number begins with a K, the letter is NOT part of the batch number.</p> <p>If the exact production date can't be defined due to the sourcing of the product, use the date when the goods are outgoing from your warehouse to ours.</p>
	<p>Quantity of pieces on pallet, prefilled by K2</p> <p>If you have to deliver a partial pallet, you can adjust the amount in this field accordingly.</p>
	<p>In case the product is manufactured in different locations, you can use this field to insert a coded name for your different plants. Then you will be able to identify which plant is affected by possible inquiries.</p> <p>If it is necessary to specify the responsible employee, the person symbol must be displayed by clicking on the first input field. In the second input field, the employee abbreviation is integrated in the 10-digit code (supplier abbreviation + location + employee abbreviation).</p>

General packaging and delivery regulations

3 Orientation for palletized goods

Please note that our delivery regulations for pallet deliveries have changed. Please ensure that pallets are facing the direction of travel as your trucks can only be unloaded from the rear.

Acceptance of the goods cannot be guaranteed if the packaging instructions are not complied with.

We only accept deliveries on pallets suitable for high-bay storage and automatic conveyor technology.

We refrain from unloading if the suitability for use appears doubtful.

The following are considered unsuitable for use:

- Board missing, broken crosswise or fitted at an angle
- Floor and ceiling edge boards are damaged so that nails are visibly sticking out
- A block is missing or visibly damaged
- Obviously unauthorized repairs have been carried out using blocks or boards that are too narrow or too thin
- Rotten or moldy pallets
- Pallets must be in a dry condition and marked with an IPPC stamp
